Quiz 4

读程序写结果

```
1 • main()
                                                  2 • main()
   { int num=0;
                                                     { int i=0,s=0;
    while(num<=2)</pre>
                                                       do
    { num++;
                                                           s+=i*2+1;
     printf("%d\n",num);}
                                                            printf("i=%d,s=%d\n",i,s);
   }
                                                            i++;} while(s<10);
                                                      }
3 •
       #include <stdio.h>
       main()
        { int i,m=1;
          for(i=5;i>=1;i--)
            {
                   m=(m+1)*2;
                   printf("m=\%d\n",m);
            }
          }
4 · 指出下面三个程序的功能, 当输入为: "quert?"时, 它们的执行结果是什么?
(1)
    #include <stdio.h>
                                                 (2)
                                                      #include <stdio.h>
     main()
        { char c;
                                                       main()
          c=getchar();
                                                          { char c;
          while (c!='?')
                                                            while ((c=getchar())!='?')
              { putchar(c); c=getchar();}
                                                                putchar(++c);
        }
                                                          }
(3)
    #include <stdio.h>
     main()
        { while (putchar(getchar())!='?');
        }
```

```
5 • main()
   { int i;
     for(i=1;i<=5;i++)
                                                      6 •
                                                              main()
        { if(i%2)
                                                             { int a,b;
               putchar('<');
                                                                for(a=1,b=1;a<=100;a++)
                                                               { if(b>10) break;
