一、选择

 C A B C C C A C A C

二、分析

1,

- (1) 立即数寻址 无;
- (2) 寄存器寻址 无;
- (3) 直接寻址,有效地址 EA = 1000H: 物理地址 $PA = (DS) \times 10H + EA = 21000H$:
- (4) 寄存器间接寻址, EA = 0100H, $PA = (DS) \times 10H + EA = 20100H$;
- (5) 相对寄存器寻址,EA = (BX) + 10D = 0100H + 000AH = 010AH, $PA = (DS) \times 10H + EA = 2010AH$;
- (6) 基址+变址寻址,EA = (BX) + (SI) = 0100H + 00A0H = 01A0H, $PA = (DS) \times 10H + EA = 201A0H$;
- (7) 相对基址+变址寻址,EA = (BX) (SI) + [VAL] = 0100H + 00A0H + 0050H = 01F0H,PA = (DS) × 10H + EA = 201F0H;

2、

- (1) 立即数传送, (AX) = 1200H;
- (2) 寄存器传送, (AX) = (BX) = 0100H;
- (3) EA = 1200H, PA = (DS) × 10H + EA = 21200H, 内存单元的字数据传送, (AX) = B61AH;
- (4) EA = (BX) = 0100H, $PA = (DS) \times 10H + EA = 20100H$,内存单元的字数据传送,(AX) = 5132H;
- (5) EA = (BX) + 1100H = 1200H, PA = (DS) × 10H + EA = 21200H, 内存单元的字数据传送, (AX) = B61AH;
- (6) EA = (BX) + (SI) = 0102H, $PA = (DS) \times 10H + EA = 20102H$,内存单元的字数据传送,(AX) = 8326H;

3、

(1)×,寄存器类型不匹配,若按照字数据传送,

【改】 MOV AX, BX

(2)×,两操作数不能同时为存储单元,

【改】 MOV BX, [SI], 或 MOV [BX], SI

(3)×,寻址方式中只能出现一个变址寄存器,

【改】 MOV AX, [BX][DI]

(4)×, AX 前不能有段跨越前缀, 应去掉 ES:,

【改】 MOV MYDAT[BX][SI], AX
