[例2-9]m=2质点的位矢 $\vec{r}=t\vec{i}+2t^2\vec{j}$,确定t时刻质点对o点动量矩(均为SI制)

解:
$$\vec{p} = m\vec{v} = m\frac{d\vec{r}}{dt} = 2\vec{i} + 8t\vec{j}$$

$$\vec{L} = \vec{r} \times \vec{p} = (t\vec{i} + 2t^2\vec{j}) \times (2\vec{i} + 8t\vec{j})$$

$$= 0 + 8t^2\vec{i} \times \vec{j} + 4t^2\vec{j} \times \vec{i} + 0$$

$$= 4t^2\vec{k} \text{ (SI)}$$

$$\mathbf{\hat{R}}: \vec{L} = \vec{r} \times \vec{p}$$

$$= \mathbf{rmv} \sin 150^{\circ} \vec{k} = 12\vec{k}(SI)$$

$$\vec{\mathbf{M}} = \vec{r} \times \vec{\mathbf{F}}$$

$$= r\mathbf{F} \sin 150^{\circ} (-\vec{k}) = -3\vec{k}(SI)$$

矢量叉乘时,应使两起点重合
